**Food**

Chief - Complaint

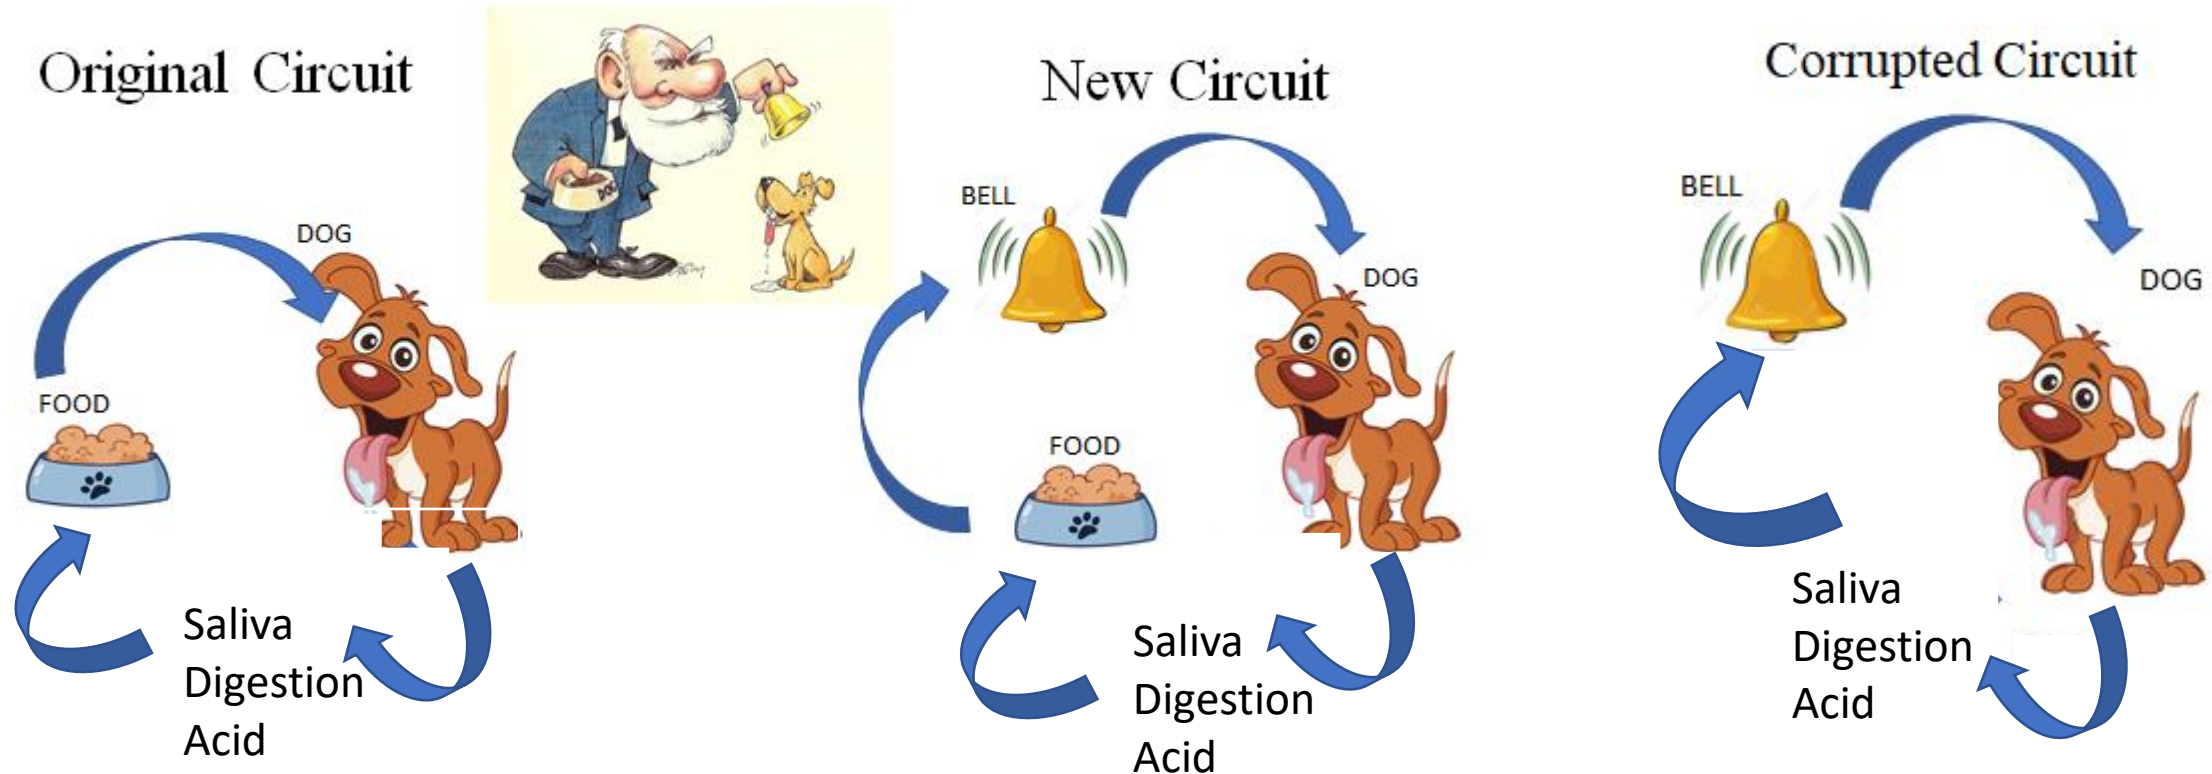

# Steps

- 1) How to ask "5 sense words" in chief complaint.
- 2) How to differentiate common – peculiar.
- 3) How to ask Food, Fear and Dreams , To confirm the "words of 5 senses of the state"
- 4) To eliminate all level of PREJUDICE in the patient and the Homeopath.
- 5) The leap from words of state  to the source of Similimum,  
In a spontaneous, indirect way.

# How does a particular source become our remedy state?

# Pavlovian Conditioning affecting the emotional reaction.

## The little Albert Experiment.

1) Before  
Conditioning

3) After  
Conditioning

In the controversial albeit interesting experiment, Little Albert 9-11 months was conditioned to develop a fear of white rats. Fear/startling at loud noises, is an innate unconditioned response.

Little Albert was unafraid of white rats and furry objects.

As he was playing with a white rat, a loud noise with a hammer was created in the background, Little Albert started crying in fright.

This was repeated.

Later, when Albert would see a white rat(or even other furry objects) he would begin to cry and show fear, while earlier he was unafraid of them.

# PAVLOVIAN Conditioning affects the Immune system as well!

## The Robert Ader Experiment

Cyclophosphamide  
(Used in  
Chemotherapy)

Group A

Immunosuppression Induced

Cyclophosphamide  
+ Saccharin

Group A

Immunosuppression Induced

ONLY Saccharin  
given

Group A

Immunosuppression Induced

Saccharin

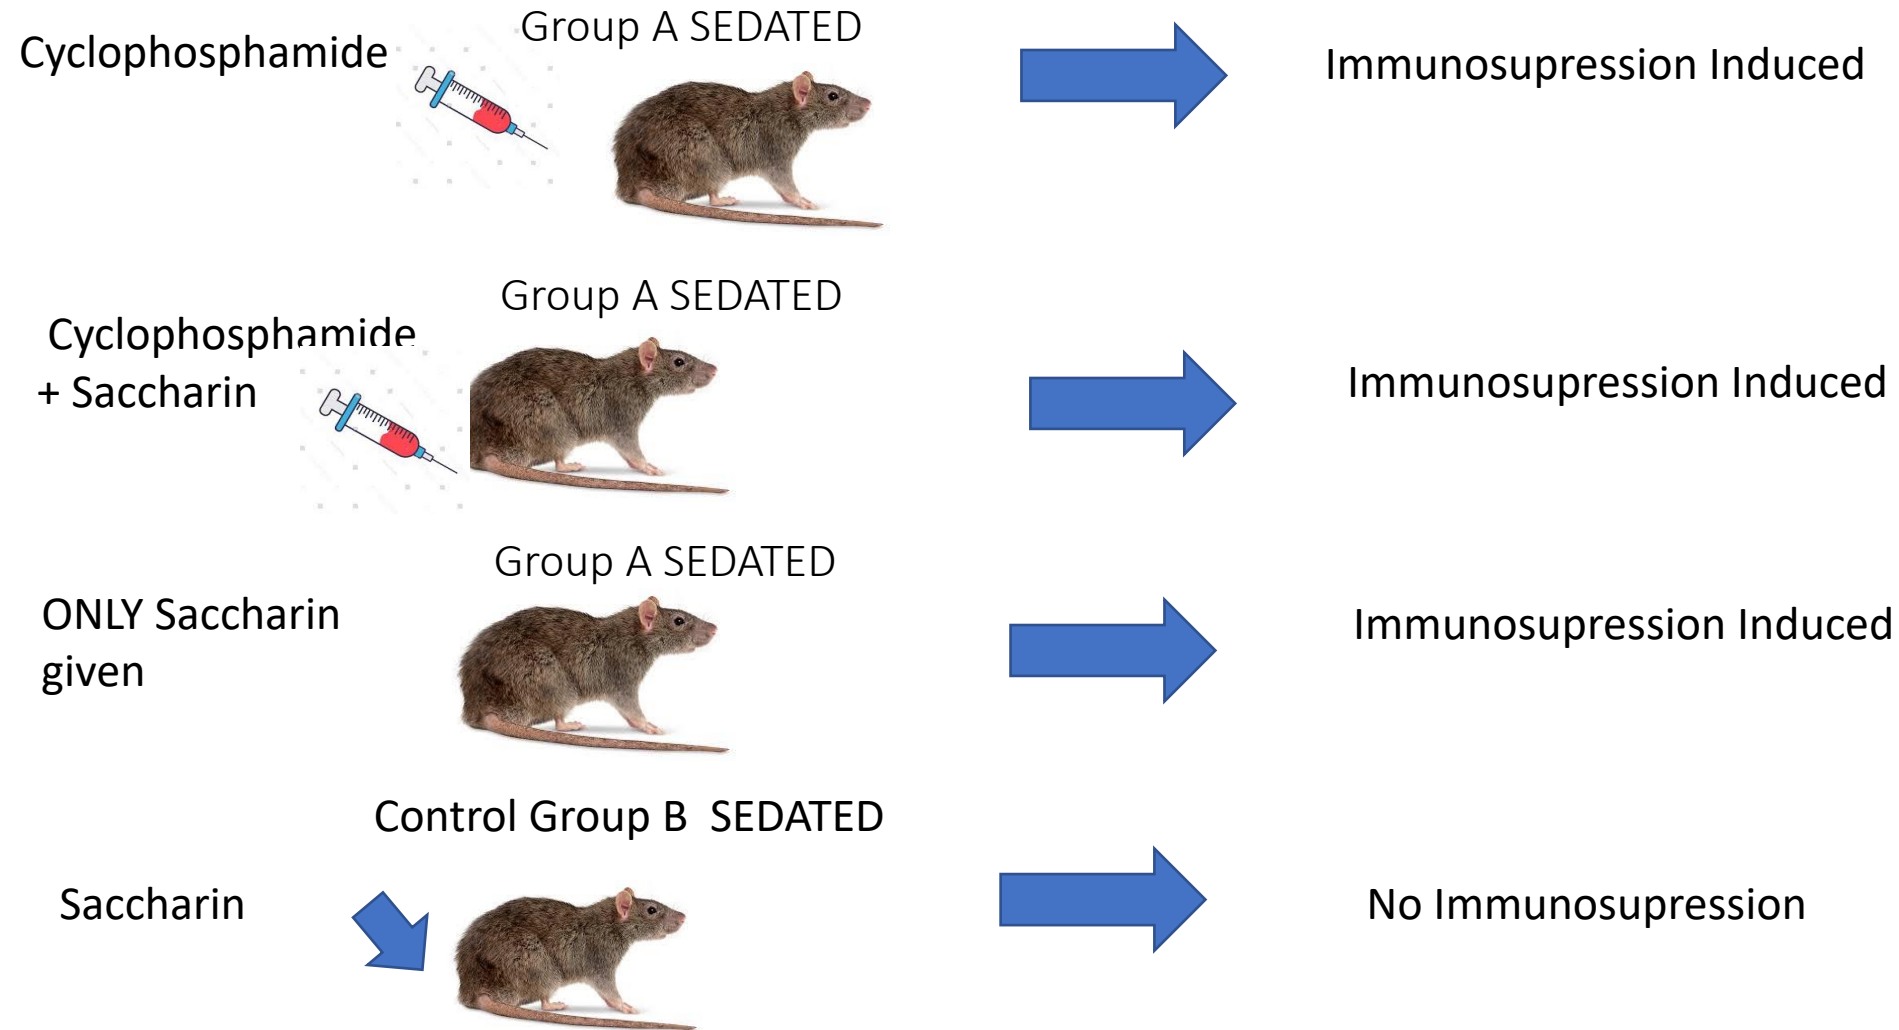

Control Group B

No Immunosuppression

CONTINUE....

Experiment repeated with **sedated** rats, confirming that conditioning occurs in the Automatic/Unconscious brain only.

CONTINUE....

In Ader and Cohen's experiment the pairing of Saccharin (conditioned stimuli) and cyclophosphamide (unconditioned stimuli) in rats of group A; resulted in immunosuppression being documented in those rats with **SACCHARIN ALONE**.

Even more path breaking is when the findings were replicated in **SEDATED** rats, confirming that the conditioning involves **ONLY** the Automatic/Unconscious Brain.

**IS THIS THE EXPLANATION TO THE ORIGIN OF DISEASE?**

UNCONSCIOUS CONDITIONING which occurs in early childhood and is strengthened by repetition, is the 'DISEASE STATE'.

Later in life, when the 'Conditioned Neural Circuit' is *Triggered* intensely or repeatedly, the 'DISEASE PATHOLOGY' results.
